Results-oriented **Software Developer** with **2.5+ years** of experience in building scalable and reliable web applications using **.NET Core, C#, React.js, and SQL**. Skilled in **API development, data management, and performance optimization** to deliver efficient full-stack solutions. Hands-on experience in **deploying applications** using **AWS services** like **Code Build, App Runner, ECR,** and have a solid understanding of **Docker.**

Technical Skills

Languages & Frameworks	C#, .NET Core, JavaScript (ES6+), Node.js, Express.js
Frontend	React.js, Vue.js, HTML5, CSS3, Bootstrap, Tailwind CSS, HighCharts.js, PPTXGENJS
Backend & APIS	RESTful Web APIs, LINQ, SQL, Authentication (OAuth 2.0, RBAC), Swagger/Postman
Databases	SQL Server, PostgreSQL, MongoDB
Cloud & DevOps	Docker, AWS (S3, EC2, Lambda, CodeBuild, App Runner, ECR), CI/CD Pipelines
Collaboration & Tools	Git, Jira, Visual Studio, VS Code, Agile/Scrum practices, Cursor
Soft Skills	Problem Solving, Collaboration, Adaptability, Continuous Learning, Communication

Work Experience

Software Developer | DataZymes ***Feb '23 – Present***

- Built and maintained **scalable full-stack solutions** using **.NET Core, C#, React.js, Vue.js, SQL, and Postgres**, delivering enterprise-grade features used by 800+ users.
- Designed and optimized **RESTful APIs,** implementing **JWT/OAuth authentication, RBAC** and integrated libraries **like pptxgenjs.** Integrated **Google Cloud Storage** for secure file management and implemented comprehensive **role-based access control.**
- Contributed to the design of **UI prototypes, user flows, and database architecture**, while optimizing backend APIs to reduce redundancy and improve performance.
- Collaborated cross-functionally with **Data Engineers** (leveraging their web scraping pipelines) and **QA teams** (critical bug fixes), while also engaging with **clients and stakeholders** to clarify requirements and ensure reliable delivery.
- Handled, deployed, and maintained applications on **AWS** using **S3, EC2, CodeBuild, App Runner, and ECR**, leveraging **Docker** for containerization to support efficient cloud deployments and CI/CD practices.

Projects

Intellia | Client Project – Pharma Competitive Intelligence Platform

- Developed multiple **dashboards** in the **Dashboard module** using **React.js**, **.NET Core APIs**, and **Highcharts.js**, enabling users to **download customized, editable PPTs** via **PptxGenJS**.
- Developed and optimized **backend APIs** and designed **database schemas** to support core features.
- Strong understanding of **data structures** and skilled in writing **SQL joins** to create meaningful and data-driven visual insights.
- Took ownership of the **Library**, **Newsfeed** and **chatbot** modules, integrating **Google Cloud Storage** for secure file management.
- Improved the overall **UI** and **UX** of the application by enhancing dashboard interactivity, optimizing layouts, and ensuring intuitive data visualization for better user engagement and accessibility.

M4 | Client Project – Pharma Data Management Platform

- Took ownership of the **UI** and **edit functionality**, developing responsive, interactive interfaces using Angular and integrating with Express.js APIs.
- Integrated **Vertex AI endpoints** for contextual search and chat, enhancing analytics and accelerating decision-making for pharma CI workflows.
- Implemented reactive updates via **shared services** and ensured seamless **UI state handling** for image selection and display.
- Improved UI/UX by refining forms, tables, and dashboard layouts for better accessibility and usability.

Maven | Client Project – Pharma Marketing Test and Control Platform

- Developed a **React-based Test & Control analytics dashboard** with real-time data visualization and statistical insights.
- Built **interactive charts and tables** for experiment results, lift calculations, and reporting using Recharts.
- Designed **prototypes, user flows, and database architecture** to support scalable and intuitive workflows.
- Implemented **AI-assisted component generation** to maintain design consistency and streamline development.
- Took ownership of the **Run Iterations module**, managing multiple input fields, scenarios, and iterations, including duplicating scenarios and executing functions to extract results.
- Developed a **file upload and analysis workflow** with CSV parsing, drag-and-drop support, and progress tracking.
- Managed **end-to-end deployment** of backend and frontend across Dev, Prod, and QnA using AWS CodeBuild, ECR, and App Runner.
- **Mentored and reviewed juniors' work**, ensuring quality and smooth collaboration within the team.

AI-ResumeMatcher | Personal Project

- Developing an AI-powered resume matching platform using **React.js** and **FastAPI**
- Integrating **OpenAI GPT models** and **BERT embeddings** for intelligent skill extraction and compatibility scoring.
- Implementing comprehensive authentication system with Firebase (Google OAuth + email/password) and secure user management using MongoDB for scalable data storage.
- Building file processing capabilities supporting PDF, DOCX, and TXT formats with automated text extraction and parsing using pdfminer, python-docx

Education

Acharya Institute of Technology, Bengaluru Aug '19 – May'23

B.E. in Information Science - GPA: 8.7

Achievements & Activities

- **Excellence Award**: Received client appreciation and internal recognition for excellence in project execution and teamwork.
- **Hackathon Winner**: Won 1st place for building an **AI-based Data Quality Platform**, showcasing innovation in data validation and anomaly detection.
